Gloobox LiveOps

Gloobox LiveOps

Live Ingest Control Multiviewer-Based Web Browser App

Available as:

Software Kit

Turnkey Appliance

Gloobox LiveOps Turnkey Systems use a benchmarked and highly tested server platform which enables 24/7 operation.

Gloobox LiveOps is a multiviewer-based live ingest control application that provides remote control of Gloobox Capturer via a web browser. It allows operators to control the recording of feeds from multiple sources including live sports and studio feeds.

Live feed recordings can be viewed and controlled via a web browser. It can control multiple channels across multiple Gloobox Capturer servers.

Gloobox LiveOps also allows the assignment of a pool of backup emergency channels for users. This allows users to quickly switch their critical recordings to a secondary channel in the case of the failure of one of their primary channels.

Gloobox LiveOps is designed to run on a redundant and hot failover platform.

Gloobox LiveOps Features & Benefits :

Live recording control application with web brower-based interface.

- Web-based centralized ingest control application.
- Multiviewer based view and control of channels.
- View and Control of up to 9 channels per user.
- Emergency backup channel feature.
- Multi-user support.
- Client-server architecture.
- Designed to support failover redundancy.
    - Redundant node option available.
- Centrally manages Gloobox Capturer output systems and templates.
- Support for house timecode reference via LTC timecode input.
- Tracks channel availability and status for all controlled channels.
- Locks channels while live recordings are taking place.
- Combines channels into resource groups.
